

The background of the advertisement is a photograph of a man and a young boy on a golf course. Both are crouching on a green, holding golf clubs and looking at a golf ball on the grass. The man is on the left, wearing a dark vest and light-colored pants. The boy is on the right, wearing a light-colored shirt and dark pants. A large tree is visible on the left side of the image. The sky is clear and blue. The Aqua-Zorb 45 logo is positioned at the top center, with 'AQUA-ZORB™' in white text on a green and blue gradient background, and '45' in large, bold, blue numbers to its right.

AQUA-ZORB™ 45

CREATE THE PERFECT PLAYING SURFACE

AQUA-ZORB 45 UNIQUE CHEMISTRY

Does not contain any environmental oestrogens such as nonyl and alkyl phenols or alcohol ethoxylates but does contain very slowly biodegradable chemistry to ensure that AQUA-ZORB is not leached and quickly absorbed by the regular daily irrigation system like most other wetting agents.

Trials have proved that regular doses (4–6 weekly) of AQUA-ZORB 45 will reduce turf hydrophobicity significantly due to its ability to penetrate even the most hydrophobic soil particles and remove some of the waxy coatings.

By creating the perfect playing surface and eliminating hydrophobic soil conditions, any subsequently applied fertilisers, fungicides and pesticides will quickly reach the soil structure where their intended function can be performed.

ELIMINATE HYDROPHOBIC SOIL CONDITIONS

AQUA-ZORB™ 45

THE SAFE, NEW, LOW COST & HIGHLY EFFECTIVE ALL-ROUND WETTING AGENT FROM TURFTECH INTERNATIONAL

AQUA-ZORB 45 is designed for use in 4–6 weekly maintenance programmes to control localised dry spot (LDS), and maintain perfect playing conditions.

AQUA-ZORB 45 should be applied at only 20 litres per hectare in only 200–400 litres of water per hectare. It is not necessary to water-in AQUA-ZORB 45 but we do recommend a brief irrigation cycle after application in order to wash the product off the leaf blade and into the soil profile.

The well proven benefits of concentrated AQUA-ZORB Liquid such as water saving and improved drainage are still shown with AQUA-ZORB 45.

A typical scanning electron microscope picture of a sand grain before application of AQUA-ZORB 45, showing the hydrophobic coating, and after, showing very little hydrophobic coating

Untreated (left) and treated (right) soil profiles 10 minutes after 1.3cm of irrigation. On colour enhanced sections blue areas indicate wet soil, red areas dry soil

AQUA-ZORB 45 PACKS

10 litre polythene bottles
2 bottles per outer carton
Pack coverage – one hectare/
20 x 500sq. metres

APPLICATION RATE

Programme	A-Z 45	Water	Area	Timing
4–6 weeks	10 litre	200 litre	5000m ²	March–Sept
